

LBBB Local Plan Housing Requirements, Supply, Delivery Update and Proposed Main Modifications

December 2023 – Produced for the Local Plan Examination

1. Purpose

This note has been prepared by Be First in response to discussions that took place during the Main Hearings (31st October – 16th November 2023) for the London Borough of Barking and Dagenham 2037 draft Local Plan. The Inspectors requested clarification and further justification around the Council's housing requirements, supply and delivery.

This note sets out the assumptions and evidence base around the borough's housing requirement figure, the expected distribution of supply over the Plan period up to 2037 and establishes the Council's current situation with regards to 5-year supply for housing. Key components include total housing supply, small site supply, affordable housing, older persons' housing, wheelchair accessible housing, student housing, and self-and-custom build housing. Gypsy and Traveller housing need/supply is covered in a separate paper.

The paper then sets out proposed main modifications to the Plan to incorporate the conclusions of this note. These proposed main modifications are subject to Inspector review/recommendation and may be amended further on this basis.

2. Be First's Role in Delivery

Barking and Dagenham Council's planning and housebuilding functions work in a different way to most Councils'. The Council set up Be First in 2017 as a regeneration vehicle. Be First is wholly owned by the Council and provides statutory planning, development and delivery services on the Council's behalf. This gives us more capacity and specialist resource to bring forward sites on council owned land, and leverage/ acquire sites outside of this. It also demonstrates the Council's dedication to ambitious housing delivery. Be First actively engage with the development market to bring forward site delivery. This is done in several ways including:

- The Be First Development team lead on the buying and selling of sites, and this is done with the regeneration vision at the forefront.
- The Development Management team work constructively with developers to try to get planning application proposals to a position where they can be approved, and currently 100% of major and minor applications are decided on time within the borough.
- The Planning Consultancy Team prepare planning applications on behalf of Be First and third parties, having a clear understanding of the planning/regeneration vision for the borough.
- Be First proactively engage with key stakeholders (e.g., Network Rail, Ford, Segro, Legal and General developers etc), to sound out future delivery opportunities that would allow for comprehensive redevelopment of our transformation areas.

Be First also place high emphasis on the delivery of affordable housing and has brought forward 20% of London's affordable housing, on behalf of LBBB, since COVID. Additionally, around 7,500 homes are expected to be delivered on Council owned or part-owned sites allocated in the submitted Local Plan during the Plan period.

3. General Overview

Whilst we deal with each area in separate sections below, we have set out the following in the first instance for clarity:

Housing Requirement - our housing requirement (38,864) is based on the London Plan 2019 targets for the borough for 2019/20-2028/29 and the GLA 2017 SHLAA for the period beyond this up to 2037 (the end of the Plan period).

Undersupply - we have an undersupply of 2,483 taking into account completions recorded between 2020/21 and 2023/2024. This can either be factored into the first 5 years, or by spreading it across the Plan (also known as 'the Liverpool Method'). We are of the view the Liverpool Method is justified in the case of the Barking and Dagenham Local Plan.

Stepped Housing Requirement - based on the London Plan 2021 targets for the borough to 2028/29, and the GLA SHLAA capacity figures beyond this, we have established a stepped requirement is both justified and appears achievable based on our housing trajectory/supply. This is set out below in Table 3, taking into account the undersupply spread across the Plan period.

Buffer - A 20% buffer needs to be applied for the first 5 years of the Plan (2023/24-2027/28) as a result of previous under-delivery against the Housing Delivery Test. We now understand that whilst this does not impact our housing requirement, it is taken into consideration when ascertaining whether the Council has a 5-year housing land supply. The buffer adds a need for us to demonstrate supply of an additional 424 homes per year (for the first 5 years) on top of the stepped requirement (which set out the requirements for each period of the Plan), inclusive of the undersupply.

Housing Supply - This is the number of homes it is expected can come forward over the Plan period based on the sites allocated in the Plan and their capacity assessments as calculated by the borough's 2021 Strategic Housing Land Availability Assessment (SHLAA) and, where relevant, updated by subsequent capacity assessments (e.g., through approved planning applications with higher housing figures than the capacity set out by the SHLAA).

5-year supply - This note demonstrates that the Council would have a 5-year deliverable supply from the anticipated point of adoption, as required by the National Planning Policy Framework (NPPF) and measured against the housing requirement (as proposed to be modified).

4. Housing Requirement

The submitted Local Plan contains a housing requirement of 38,864¹ which covers the Plan period (2020/21-2037). One action from the hearings required this to be set out more clearly in the Plan to clarify the difference between the two figures used when talking about expected housing delivery over the Plan period, namely the 38,864 housing requirement and the 44,051 housing supply. The former figure reflects the minimum housing requirement as established using the London Plan 2021

¹ This includes the full 19,440 figure from the London Plan which covers 2019/20-2028/29. Whilst the start of this period falls slightly prior to the Plan period, Barking and Dagenham Council is projected to meet the entirety of the London Plan 2019-2029 housing target by the end of 2028/29.

figures, whilst the latter figure reflect the housing supply trajectory that the Council anticipates can be delivered over the Plan period based on the allocated sites.

The minimum housing requirement and stepped housing requirements have been calculated taking into account the following:

- the London Plan targets for 2019/20-2028/29 (19,440) or 1,944 per annum, and
- the GLA SHLAA capacity figures for 'phase 4' 2029/30-2033/34 (13,499) or 2,699 per annum, and
- the GLA SHLAA capacity figures for 'phase 5' 2034/35-2040/41 (13,359) or 1,908 per annum for years 2034/35-2036/37

4.1. Justification for using this approach to calculate the housing requirement:

LBBD's housing requirement calculation is based on Policy H1(a) of the London Plan which sets a 10-year housing requirement for Barking and Dagenham of 19,440 homes between 2019/20 and 2028/29. This equates to 1,944 dwellings per annum (DPA). The targets for each London Borough were based on the 2017 London SHLAA and updated as part of the examination process for the London Plan.

The London Plan makes clear these targets are the basis for planning for housing in London, and Boroughs are not required to revisit them in developing their own plans unless evidence suggests delivery can be achieved above those targets and in line with the London Plan's strategic policies. Furthermore, the London Plan also says that if a target is needed beyond the 10-year period to 2028/29, Boroughs should draw upon the 2017 SHLAA and any local evidence of identified capacity, in consultation with the GLA, and should take into account any additional capacity that could be delivered as a result of any committed transport infrastructure improvements. Boroughs should also roll forward the housing capacity assumptions applied to the London Plan for small sites.

4.2. Justification for a Stepped Housing Target

The 2017 GLA SHLAA shows capacity for 2029/30-2033/34 as 2,699 per annum, and for 2034/35-2040/21 as 1,908 per annum. The Council's housing supply evidence (as set out in the Strategic Housing Land Assessment 2021 and recently updated trajectory, updated following the Local Plan hearings in October/November 2023) shows broadly that the London Plan stepped requirements can be met in the borough over the plan period and that these requirements reasonably reflect the Council's evidence (with higher delivery being expected in the medium-term).

Whilst the Council's supply evidence shows the GLA SHLAA capacity figures could be exceeded towards the later years of the plan period, this relies on large sites in multiple ownership which will require delivery support through masterplans, infrastructure, and in some cases, land assembly. As the delivery plans for several of these sites is currently high level, housing projections aren't yet firm enough to provide a robust stepped trajectory target (or indeed to set the housing requirement as the expected housing supply figure). The evidence from the borough's development portfolio clearly shows there is potential for higher capacity, which will provide a degree of flexibility. That said, the London Plan stepped housing requirement is judged to be a sound basis for planning for housing in the borough as outlined below.

The table below uses our updated housing trajectory to identify expected delivery over the remainder of the Plan period, starting from 2023/24, and the yearly average delivery expected for the short, medium and long-term periods of the Plan:

Table 1: Anticipated Supply over Short, Medium and Long-term (based on Updated Housing Trajectory)

Total Expected Delivery 2023/24-2027/28	Average yearly total (first 5 years 2023/24-2027/28)	Total Expected Delivery 2028/29-2032/33	Average yearly total (years 6-10)	Total Expected Delivery 2033/34-2036/37	Average yearly total (years 11-14)
12,745	2,549	14,077	2,815	15,338	3,835

These figures suggest the stepped requirement targets based on the London Plan 2021 and GLA SHLAA 2017 can be met, and even exceeded. The updated Stepped Trajectory is clearly set out in Table 3 below once the impacts of the shortfall have been added to the requirements established via the London Plan/GLA SHLAA, and this shows that even with the undersupply added to the requirement, our delivery is expected to exceed them.

5. Impact of the Shortfall

Our housing completions data since 2021 (London Plan adoption year) shows that we underdelivered by 2,483 over the 2020/21-2022/23 period². This averages out as 497 per year over the first five-year period, or 177 per year if spread over the remaining Plan period (2023/24 to 2036/37)³. Once added to the yearly housing requirements for the first 5 years, these figures are compared to LBBD's anticipated supply in Table 2 below.

Table 2: Supply vs Different Scenarios for Yearly Target

Average Yearly Supply Expected (Years 1-5)	Baseline yearly delivery target from the London Plan	Increased yearly baseline delivery target with undersupply spread over the first 5 years	Increased yearly baseline delivery target undersupply spread over the remainder of the Plan (Liverpool Method) - Preferred Approach
2,549	1,944	2,441	2,121

6. Case for the Liverpool Method (spreading previous undersupply over the remaining Plan period)

The Council are of the view that there is sufficient justification to support spreading the undersupply over the remaining Plan period (14 years from 2023/24-2036/37) as opposed to this being fully covered in the first 5 years of the Plan. We believe this approach is justified by the below:

- The Borough is expecting to exceed its 10-year London Plan target by 2028/29. This takes into account our completions since 2019/2020 (when the London Plan target 10-year target

² 2022/23 Completions – 1,245 (699 under target of 1,944), 2021/22 Completions – 1056 (888 under target 1,944), 2020/21 Completions - 1048 (896 under target 1,944)

³ Total Shortfall 2020/21 - 2022/2023: 2,483 over 14 years (2023/24-2036/37) = 177 (additional homes a year), 2,483 over 5 years (2023/34-2027/28) = 497 (additional homes per year)

starts) and expected delivery up to and including 2028/29 established by the updated housing trajectory.

- There are a number of transformation areas in the borough where significant delivery is programmed during years 6-10 of the Plan (e.g., Chadwell Heath Industrial Estate which is expected to bring forward 3,000 homes during the Plan period). Our research, obtained from planning applications and developers (Be First and 3rd party), anticipates significant delivery during this period (as shown in the Updated Housing Trajectory at Appendix 3) and therefore supports the case for undersupply to be spread across the remainder of the Plan.

Assuming the Liverpool method for undersupply is acceptable by the Inspectors, our minimum housing requirement (without the 20% buffer required for the first 5 years, which is discussed separately in more detail in section 7 below) each year for the first 5 years would be 2,121. Taking into account the stepped requirement, this would mean a stepped requirement of 2,876 per annum between 2029/30 and 2033/34, and 2,085 per annum between 2034/35 and 2036/37 (as shown in Table 3 below).

Table 3: Updated Stepped Requirements (with undersupply)

Plan Period	London Plan/GLA SHLAA based target	New requirement (London Plan/GLA SHLAA target + undersupply spread across Plan period)
2020/21-2028/29 (with first 5year post adoption period starting 23/24)	1,944	2,121
2029/30-2033/34	2,699	2,876
2034/35-2036/37	1,908	2,085

7. 5-Year Housing Land Supply and Buffer

Due to LBBD's housing delivery test results which fell below the GLA yearly delivery target for the borough of 1,944 a year over the past 3 years, a 20% buffer is required to housing targets for the first 5 years (2023/24-2027/28). The buffer adds an additional 424 per year to the minimum requirement yearly average⁴. This, on top of the minimum housing requirement established in Section 5 above, produces a 5-year housing supply figure of 2,545, or 12,725 over the 5-year period as a whole.

As set out in Table 2 above and in the updated Housing Trajectory, our estimated yearly housing supply per annum over the first 5 years is 2,549 (or 12,745 over the 5-year period as a whole). With or without the 20% buffer, 5-year supply can be met. Section 8 below sets out in more detail how we have calculated the borough's housing supply for each period of the Plan (0-5 years, 6-10, and 11+)

8. Housing Supply over Plan Period (5-year supply, 6-10-year period and 11+ years)

Appendix A contains a breakdown of all the allocated housing sites within the Plan and shows which sites are considered deliverable within the first 5-years, those deemed developable in the 6-10-year

⁴ $0.2 \times 2,121$ (housing target established from London Plan of 1,994 + 177 yearly undersupply under the Liverpool Method)

period, and sites anticipated to come forward in the longer term (the remainder of the Plan period). The trajectory sets out a relatively conservative approach to deliverability (i.e., 5-year supply) mostly considering completions since April 2023, and where there is extant planning permission.

For the case of multi-phased sites, numbers shown as part of the first 5-year supply are, for the most part, those that have full consent (e.g., full planning permission or reserved matters approval) or are resolved to approve. The exceptions are some of our large-scale sites where we have information from the developer to suggest more delivery could be completed within the first 5-year period. This includes:

- **Barking Riverside (Site AA)**, one of London's largest development sites. For this site, we have taken into account the information provided in EX177 (a table provided by Barking Riverside Limited anticipating delivery over the Plan period, which includes detail on the assumptions they have made). The total completions over the Plan period have been averaged out in our trajectory, which we believe is a good indication of delivery based on information that has been provided in BRL's anticipated delivery table. The table provided by BRL includes the following information/expected delivery dates:
 - 1,606 expected completions over 2023/24 and 2024/25. These numbers have RM approval.
 - 2,450 expected completions (additional to the above) by the end of 2028/29. These numbers have Sub-Framework Plan approval⁵ and therefore we think this provides greater evidence to suggest these numbers coming forward in the deliverable period, particularly given our regular interactions with Barking Riverside Limited through the steering group and their Annual Monitoring Report.
 - 2,000 expected completions (additional to the above) between 2025/2026 and 2029/30. These are sites with SFPs not currently approved (but BRL have forecast this approval for March 2025).
 - 926 per annum between 2032/33 and 2036/2037.

Including both homes with RM approval and homes with an approved Sub-Framework Plan (which is an important preceding step towards RM approval for the site), this totals 4,006 homes over the first 5 years which we consider to be deliverable in this period. Using our approach of averaging BR delivery across the Plan period, the 5-year delivery for the site is anticipated to be just under this at 3,825.

- **Former Ford Stamping Plant (Site XJ)** - completion dates set out in the planning application supporting documents have been used to inform end dates for delivery within the Plan period. Again, these have been averaged out based on end completion date. These are set out below for context:

⁵ This Sub-Framework Plan (SFP) was approved at Planning Committee on 16 October 2023 (<https://modgov.lbbd.gov.uk/Internet/mgAi.aspx?ID=96630>). SFPs are part of a three-tier permission for Barking Riverside's Outline Planning Permission which introduced a requirement for SFPs in advance of Reserved Matters ('RMs'). The elements that the SFPs for Barking Riverside are required to address are set out in this committee report (<https://modgov.lbbd.gov.uk/Internet/ieListDocuments.aspx?Cid=176&MID=13042#AI96630>) under the heading 'Condition 32 Sub-Framework Plan Matters to be addressed'. Sub-Framework Plans are consulted upon publicly, and with relevant internal and external stakeholders, similar to the process for planning application consultation. SFP are being required for Barking Riverside due to the extensive size of the site and the long time-scales for delivery.

Phase	Homes	Start Date	End Date
Phase 1	937	2023	2029
Phase 2	873	2025	2031
Phase 3	536	2031	2034
Phase 4	466	2033	2036
Phase 5	690	2034	2039

- Phase 1 has RM approval. Similar to BRL, this roughly matches the averages set out in our trajectory below for the deliverable period (937 homes with RM approval, 750 for the first 5 years assumed via averaging total Plan period delivery over the Plan period).

- **Beam Park (Site AE)** - completion dates set out in the planning application supporting documents have been used to inform end dates for delivery within the Plan period. Again, these have been averaged out based on end completion date. These are set out below for context:

Phase A of the above is now complete, and Phase C has RM approval.

- **Be First (council owned) schemes** (e.g., Gascoigne East - Site AJ, and Gascoigne West - Site AL) that are more advanced in the pre-app process as we have more certainty on the progression of these sites and control over the speed of their delivery (e.g., the next phase of Gascoigne Estate West).

Further details on the assumptions underpinning the table are set out in Appendix B of this note.

Figures for years 6-10 are generally from sites that have had recent pre-app discussions, submitted applications (including Vicarage Field- Site AK, as whilst the application has lapsed, engagement with the developer is expected to continue to bring forward a new application soon) and approved outline applications (all of which suggesting a strong indication for the intent to develop), as well as where proposals are being drawn up on Council owned sites.

Figures for 10+ years are sites without submitted planning applications or recent pre-app discussions, or where previous permission for smaller sites has lapsed. However, these have been identified through the SHLAA as areas development is likely to come forward (e.g., because of longer term development intentions of the Council/Be First).

9. Estate Regeneration on Be First/Council Owned Sites

The approach to establishing net capacity for these sites is set out in the SHLAA. For ease, the detail for the following larger-scale Council owned sites has been reiterated below, alongside additional relevant information on what has happened since.

- Site AS Padnall Court and Reynolds Court
- The approach to capacity initially utilised a formula-based approach. A net capacity was also provided taking into account the existing development quantum of the site (i.e., number of existing dwellings on site at present).

- Feasibility work is ongoing for the wider Marks Gate area, with initial feasibility work suggesting a figure slightly higher than the 125 net capacity identified in the SHLAA. However, given the absence of planning application at this stage, we maintain a conservative figure of 125 for the purpose of the housing trajectory/capacity.

- As a smaller site where more feasibility work and engagement has taken place, we expect this site to come forward in the 6-10 year period.

- Site XE (Ibscott Close Estate and highways land at Rainham Road South/Ballards Road)

- The approach to capacity initially utilised a formula-based approach. A net capacity was also provided taking into account the existing development quantum of the site (i.e., number of existing dwellings on site at present).

- Feasibility work is ongoing for the wider Dagenham Village area, although it is still in the relatively early stages.

- We expect this site to be delivered later in the Plan period due to its larger scale and taking into account the current stage of the feasibility work.

- Site XC (Harts Lane Estate)

- The formula-based capacity calculation suggested that approx. 8,530 units are achievable on the site, however it was noted that this ignores the river corridor in the site and the fact that the site is being proposed as a mixed-use redevelopment.

- Initial feasibility work undertaken on behalf of the Council's development team suggested that 1500 units are achievable within the site. This capacity figure was used in the SHLAA as it is considered more robust, because it was based on site specific assessment. In addition, 78 units have been delivered on the site, so the net capacity also reflects this. (Net capacity 1,301).

- Limited additional work has taken place on proposals for this site given a current focus on other schemes and so we do not anticipate this coming forward until the latter part of the Plan period.

10. Small Sites

The London Plan sets out a minimum housing target for Barking and Dagenham of 1,990 up to 2028/29. It is anticipated that 472 of the Plan's allocated small sites could be delivered in this period, with 381 homes expected/delivered through windfall (from 2019/20 when London Plan target initiated, to 2028/29). This leaves a shortfall of 1,137 homes for the 10-year period (or 114 a year when averaged). Be First intends to try and address some of this shortfall through its Innovative Sites programme⁶ (which it intends to launch early next year). Sites within this programme will be advertised via the GLA as part of the Small Sites, Small Builders Programme. This programme does contain some of the sites allocated in the Plan, but also contains smaller unallocated sites. Currently

⁶ The Innovative Sites Programme (ISP) was initiated by LBBD in 2019 as a parallel to Be First's direct delivery programme of larger projects. The programme consists of sites ranging in scale from 0.02 hectares up to 0.3 hectares. The programme is being delivered through 3 workstreams, each with their own objective:

1. Disposal for small builders, with the objective of disposing of LBBD owned sites to SME developers for the delivery of housing for local people. SMEs have the resource and capabilities to invest in and deliver small sites in innovative ways that would typically not be economical for Be First to deliver;
2. Disposal for community led housing, with the objective of disposing of LBBD owned sites for community led housing, specifically for the benefit of groups based in Barking and Dagenham or the surrounding areas; and,
3. Council-led non-general needs housing, with the objective of facilitating Be First delivery of non-general needs housing on behalf of the council to help address growing need for specialist housing.

there are an initial 29 small sites which we anticipate to be delivered in a number of ways (some through disposal, some through community led-housing, and the remainder through Be First/Council delivery). Furthermore, the Council is proposing main modifications to SPDG 1 and SP3 to show greater encouragement for small site delivery.

As discussed during the hearings, it is understood that the London Plan small sites policy/targets is a London focused interpretation/strategy based on the NPPF small sites requirement. However, for completeness, we have taken into account the NPPF requirement to "identify, through the development plan and brownfield registers, land to accommodate at least 10% of their housing requirement on sites no larger than one hectare;". For LBBD, this figure works out as a target of 3,887 homes over the Plan period. The Local Plan exceeds this with 4,118 of the homes anticipated to be delivered through allocated sites that are less than 1 ha over the Plan period.

11. Affordable housing

The Strategic Housing Market Assessment and Housing Needs Survey (2020 Update) shows a need for 1,581 affordable homes per year. A modification is proposed to correct this figure which is currently written as 1,557. Recent delivery shows that LBBD have been unable to meet this figure⁷ and it is likely this will continue to be the case due to viability constraints. To meet this need as best we can, the Council has taken the London Plan policy approach of aiming for a strategic target of 50% affordable homes across all housing developments (over 10 units), and follow London Plan policy to target at least 50% affordable housing on public sector sites and industrial land (including sites like Beam Park).

Be First are also leading by example and our current portfolio of housing schemes is set to deliver 78% affordable housing across current Be First schemes (2564 affordable vs. 568 market rent). It is anticipated that the Be First development sites expected to come forward in the medium to longer term would also have high rates of affordable housing (i.e., closer to or above 50% affordable housing), particularly as they are mostly estate renewal programmes (e.g., Ibescott Close - Site XE, and Harts Lane- Site XC). We will not have full clarity on these figures until planning applications are progressed later in the Plan period.

Several larger developments in the Borough are also planning to deliver above the 35% minimum including Dagenham Green (Former Ford Stamping Plant, Site XJ – where 46% of the 3502 are planned to be affordable), Barking Riverside (Site AA, where 40.3% of the 3504 homes with Reserved Matter consent to date are planned to be affordable) and Beam Park (Site AE, of which 50% of 3,119 will be affordable).

Taking into account our current planning pipeline ((and including the figures shown above for current active Be First schemes, and Reserved Matter approvals for Dagenham Green (Former Ford Stamping Plant), Barking Riverside and Beam Park set out above)), around 5,200 affordable homes have been secured through planning application approval on allocated sites within this Plan. These are projected to come forward over the first 5 years (2023/24-2027/28). From the largest third-party sites (Former Ford Stamping Plant, Beam Park, Barking Riverside) we would anticipate a further ~6,000 affordable homes to be delivered over the remainder of the Plan period based on their outline planning permission affordable housing percentages.

⁷ Net delivery: 666 affordable homes delivered in 2022/23, 295 affordable homes delivered in 2021/22, 291 affordable homes delivered in 2020/21

Considering all allocated sites with planning permission (using planned affordable housing unit numbers) and assuming a minimum of 35% of all remaining delivery that is expected to be over 10 units, this forecasts around 18,600 affordable homes being delivered over the Plan period. This averages 1,095 homes per year over 2020/21-2036/37. If remaining delivery over 10 units is considered at 50% affordable housing, this forecasts around 21,000 affordable homes over the Plan period (averaging 1,244 homes per year). This suggests there is likely to be a shortfall in affordable housing over the Plan period. Alongside pushing for a 50% strategic affordable housing target to try and address this, we will also continue to seek out further funding opportunities for affordable homes from Government and the GLA.

12. Older persons' housing

The Borough's SHMA and HNS 2020 found that the supply of, and demand for, sheltered accommodation is considered to be adequate, though condition is an issue. A Stock Condition Survey currently underway should provide evidence to target an asset investment strategy. As such, supply and demand are roughly in balance.

There is currently considered to be a deficit of extra care accommodation (180 units between 2018 and 2028). The Council's 'Towards a Better Housing Pathway for Older People' (EX18) sets out a proposal to commit to 180 units of extra care units by 2028. This should be enough to meet forecast need. Furthermore, BRL is now diversifying the range of developers, to include specialist built to rent, student housing and care. It is therefore anticipated that some specialist older person's housing need could be met at Barking Riverside. Aside from the proposal put forward in the Council's 'Towards a Better Housing Pathway for Older People', and some indication from BRL that there may be opportunities for care provision to come forward at Barking Riverside, we do not have a further estimation of the amount of this type of housing that is likely to come forward over the Plan period.

However, the Council are proposing to make clear through main modifications that LBBD is adopting the London Plan benchmark for specialist older persons housing for Barking and Dagenham (which is 70 units per year between 2017-2029). We anticipate 180 units of extra care to be provided over the Plan period, although we are encouraging of more coming forward to meet the targets set by the London Plan and any future need that may arise.

13. Wheelchair accessible housing

The 2020 SHMA and HNS estimated an unmet need for wheelchair accessible accommodation of 330.

There is some mismatch between the numbers needing social/affordable wheelchair accessible stock, and the allocations to that stock when it becomes available. There are a number of reasons for this including the need to minimise void periods and mismatches between locational preferences and the available stock. However, as set out in our Housing Evidence Paper (document H6), the development of council-controlled land is a key mechanism by which the policy ambitions set out in the Draft Local Plan and the London Plan 2021 on this type of housing will be achieved in the borough.

Currently, in the Be First housing scheme pipeline alone, there are 288 M4(3) homes planned (of which 171 will be fit out at practical completion and the remainder have the appropriate service and size to fit out at a later point). As such, we believe LBBD remain in a strong position to meet the unmet need for wheelchair accessible accommodation in the borough even before the 10% requirement is taken into consideration for non-Be First schemes.

Furthermore, we propose to more clearly set out LBBD's intention (through main modifications) to subscribe to the criteria for new accessible housing development laid out in London Plan Policy D7. In summary, this states that at least 10% of dwellings should meet Building Regulation requirement M4 (3) 'wheelchair user dwellings', i.e., is designed to be wheelchair accessible, or easily adaptable for residents who are wheelchair users, and all other dwellings meet Building Regulation requirement M4 (2) 'accessible and adaptable dwellings. Policy DMH 3 paragraph 2a) is clear that development proposals should meet the London Plan Policy D7 requirements. The Be First current housing scheme pipeline combined with the 10% M4 (3) already set out in outline permission for the borough's largest third-party sites (Beam Park, Former Ford Stamping Plant and Barking Riverside), demonstrates that the borough can anticipate ~1,900 of these types of dwellings being delivery over the Plan period at a minimum. Taking into account all planned delivery, we would expect at least ~4,200 M4 (3) homes to be delivered over the plan period.

14. Student housing

The 2019 SHMA and HNS set out that there are likely to be around 6,000 students requiring independent accommodation studying at Barking and Dagenham-based Higher Education establishments, suggesting there may be scope for more purpose-built developments. The 2020 update noted that the expansion plans of Coventry University (in Barking and Dagenham) had reduced and therefore we expect this need to be less. We have not received any recent applications for student housing and do not have any sites allocated specifically for student housing.

Whilst the Plan contains policies resisting the loss of family housing as family housing is a key priority for the borough given the high proportion of the population that are 15 and under, policy DHM 4 does encourage new purpose-built shared housing schemes where they meet relevant policy requirements, including meeting an identified need in the borough (such as student housing).

Furthermore, BRL is now diversifying the range of developers, to include specialist built to rent, student housing and care. It is therefore anticipated that some student housing need could be met at Barking Riverside. Aside from this, given it is likely any student housing coming forward will be from third party developers, the Council do not have a further estimation of the amount of this type of housing that is likely to come forward over the Plan period. There is zero of this type of housing in the current pipeline, but policies SP3, DHM4 and DMH5 are intended to encourage appropriate development to come forward to meet the needs of this group.

15. Self-and-custom build housing

As of November 2023, there are a total of 328 individuals and 4 groups on the Barking and Dagenham Self-and-Custom Build Register. Whilst we have not delivered specific sites to meet the self-and-custom build need or allocated sites specifically for this purpose in the Plan, policy SP3 in the submitted Local Plan encourages these to come forward. We also do not have a current estimate of how much of this type of housing may come forward over the Plan period, although we are actively trying to bring forward opportunities via the Innovative Sites Programme (further detail below).

In terms of supply, the SHMA only considers sites which are anticipated to provide for 5 units or greater, however, we are currently undertaking work to bring forward smaller, Council owned sites, that would be suitable for this type of development.

As set out above, the delivery of small sites is an area the Council is actively trying to address through its Innovative Sites Programme. The key objective is to help diversify the type of delivery of homes in the borough. This is broken down into 3 work streams: 1) sites for disposal for SME developers and housebuilders, 2) disposal for community led housing, and 3) disposal for Be First

non-general needs housing. As part of workstream 1 and 2, we will be welcoming of people interested in delivering self and custom build homes. The programme is still under development, but we are hoping to launch early next year. We anticipate up to 89 of the homes expected to come forward as part of this programme could contribute to self and custom build delivery.

We also intend to utilise the changes to regulations made in 2016 to set a local eligibility test so that we can focus our self-and-custom build efforts on those with a local connection. As part of this work, we intend to reach out to those on our register and confirm who would still like to remain on it. We will monitor the delivery of our Innovative Sites Programme to see if this has been effective in increasing self-and-custom build delivery, and monitor other delivery through the CIL forms that accompany new build planning applications.

12. Proposed Main Modifications

All references to housing requirement and housing supply will be checked to ensure they are clear prior to submission of a new version of the proposed main modifications. On top of this, the following main modifications are proposed:

SPDG 1

Justification Text

Add new justification text as follows:

Housing Requirement

3.18. The borough's housing requirement is 38,864 new homes over the Plan period (2020/21 to 2036/37). Our housing requirement calculation is based on Policy H1(a) of the London Plan which sets a 10-year housing requirement for Barking and Dagenham of 19,440 homes between 2019/20 and 2028/29. This equates to 1,944 dwellings per annum (DPA). The London Plan is also clear that if a target is needed beyond the 10-year period to 2028/29, Boroughs should draw upon the 2017 SHLAA and any local evidence of identified capacity, in consultation with the GLA, and should take into account any additional capacity that could be delivered as a result of any committed transport infrastructure improvements.

3.19. The London Plan 2021 and the GLA SHLAA 2017 set out the following for Barking and Dagenham:

- 19,440 (or 1,944 per annum) for 2019/20-2028/29 - London Plan 2021*
- 13,499 (or 2,699 per annum) for 2029/30-2033/34 - as established for 'phase 4' in the 2017 GLA SHLAA, and
- 13,359 (or 1,908 per annum) 2034/35-2040/41 - as established for 'phase 5' in the 2017 GLA SHLAA

*The 38,864 requirement includes the full 19,440 figure from the London Plan covering years 2019/20-2028/29. Whilst this falls slightly prior to the Plan period, Barking and Dagenham Council is projected to meet the entirety of the London Plan 2019-2029 housing target by the end of 2028/29.

Addressing Undersupply

3.20. Our housing completion data since 2021 (London Plan adoption year) shows that the borough underdelivered by 2,483 over the 2020/21-2022/23 period. This averages out as 497 per year over the first five-year period, or 177 per year if spread over the remaining Plan period (2023/24-2036/37). The shortfall will be spread over the remaining period of the Plan period as the trajectory shows key targets will still be met (i.e., the London Plan's targets for the borough between 2019/20 and 2028/29) and significant delivery is expected in the medium-long term through the borough's transformation areas. This would result in a target of 2,121 per annum for years 1-5 of the Plan period. The borough is expecting significant delivery of our transformation areas in the medium-term Plan period and it is expected that yearly delivery will increase in this period.

Stepped Requirements

The 2017 GLA SHLAA shows capacity for 2029/30-2033/34 as 2,699 per annum, and for 2034/35-2040/41 as 1,908 per annum. The Council's housing supply evidence (as set out in the Strategic Housing Land Assessment 2021 and recently updated trajectory) shows broadly that the London Plan stepped requirements can be met in the borough over the plan period and these

requirements reasonably reflect the Councils evidence (with higher delivery being expected in the medium-term). Whilst the Council's supply evidence shows the GLA SHLAA capacity figures could be exceeded towards the later years of the plan period, this relies on large sites in multiple ownership which will require delivery support through masterplans, infrastructure, and in some cases assembly. As the delivery plans for several of these sites is currently high level, it is not viewed that this provides a robust enough figure to establish as a stepped trajectory target (or indeed to set the housing requirement as the expected housing supply figure). As such, the stepped requirements rely on the London Plan and SHLAA figures, as well as addressing undersupply over the last 3 years. The Stepped Requirement figures are set out below:

<u>Plan Period</u>	<u>London Plan/GLA SHLAA based target</u>	<u>New requirement (London Plan/GLA SHLAA target + undersupply spread across Plan period)</u>
<u>2020/21-2028/29 (with first 5year post adoption period starting 23/24)</u>	<u>1,944</u>	<u>2,121</u>
<u>2029/30-2033/34</u>	<u>2,699</u>	<u>2,876</u>
<u>2034/35-2036/37</u>	<u>1,908</u>	<u>2,085</u>

Housing Supply over the Plan Period

Our Strategic Area policies each set out the development potential for their respective areas. This includes the indicative housing capacity expected to come forward over the Plan period. Combined, these show that the Borough has an anticipated housing supply of over 40,000 homes up to 2037. This exceeds our housing requirement of 38,864 new homes. Our projected housing supply of 40,000+ provides flexibility, and our trajectory shows it can realistically be achieved assuming the allocated sites come forward as anticipated.

Small Sites

The London Plan sets out a minimum housing target for Barking and Dagenham of 1,990 up to 2028/29. It is anticipated that 472 of the Plan's allocated small sites could be delivered in this period, with 381 homes expected/delivered through windfall (from 2019/20 when London Plan target initiated, to 2028/29). This leaves a shortfall of 1,137 homes for the 10-year period (or 114 a year when averaged). Be First intends to try and address some of this shortfall through its Innovative Sites programme (which it intends to launch early next year). Sites within this programme will be advertised via the GLA as part of the Small Sites, Small Builders Programme. This programme does contain some of the sites allocated in the Plan, but also contains smaller unallocated sites. Currently there are 29 small sites which we anticipate to be delivered in a number of ways (some through disposal, some through community led-housing, and the remainder through Be First/Council delivery). In addition, policies SPDG 1 and SP3 intend to encourage greater small site delivery.

Add new section under section 1 of SPDG1 as follows:

Policies from the main body of the Plan should be read in conjunction with the specific policy requirements for each site as set out in the individual proformas in Appendix 2.

Add new section titled 'Housing Delivery' as per the below:

Housing Delivery

The Plan establishes a housing requirement of 38,864 over the Plan period (2020/21-2036/37). This is intended to be met (and exceeded) through the sites allocated within the Plan which indicate a supply of over 40,000 new homes.

Add paragraph under 'Transformation Areas' as per the below:

5. Alongside increased densification in the transformation areas shown on the policies map, the Plan also encourages incremental intensification of existing residential areas within PTALs 3-6 or within 800m distance of a station or town centre boundary. This is to help bring forward smaller sites which also make an important contribution to the Borough's housing supply.

SP3

Justification Text

Add the following justification text:

Affordable Housing

The Strategic Housing Market Assessment and Housing Needs Survey (2020 Update) shows a need for 1,581 affordable homes per year. Recent delivery shows that we have been unable to meet this figure¹ and it is likely this will continue to be the case due to viability constraints. To meet this need as best we can, we have taken the London Plan policy approach of aiming for a strategic target of 50% affordable homes (with a 35% minimum on most sites) across all housing developments over 10 units, and follow the London Plan policy to target at least 50% affordable housing on public sector sites and industrial land (including sites like Beam Park).

Be First are also leading by example and the current portfolio of housing schemes is set to deliver 78% affordable housing across current Be First schemes (2564 affordable vs. 568 market rent).

Several larger developments in the Borough are also above the 35% minimum including Dagenham Green (Former Ford Stamping Plant – Site XJ, where 46% of the 3502 are planned to be affordable), Barking Riverside (Site AA, where 40.3% of the 3504 homes with Reserved Matter consent to date are planned to be affordable) and Beam Park (Site AE, of which 50% of 3,119 will be affordable). We will also continue to seek out further funding opportunities for affordable homes through Government and GLA programmes.

Older Persons Housing

The Borough's SHMA and HNS 2020 found that the supply of, and demand for, sheltered accommodation is considered to be adequate, though condition is an issue. A Stock Condition

¹ Net delivery: 666 affordable homes delivered in 2022/23, 295 affordable homes delivered in 2021/22, 291 affordable homes delivered in 2020/21

Survey currently underway should provide evidence to target an asset investment strategy. As such, supply and demand are roughly in balance.

There is currently considered to be a deficit of extra care accommodation (180 units between 2018 and 2028). The Council's 'Towards a Better Housing Pathway for Older People' (EX18) sets out a proposal to commit to 180 units of extra care units by 2028. This should be enough to meet forecast need.

The Council is also adopting the London Plan benchmark for specialist older persons housing for Barking and Dagenham (70 units per year between 2017-2029).

Wheelchair accessible housing

The 2020 SHMA and HNS estimated an unmet need for wheelchair accessible accommodation of 330.

There is some mismatch between the numbers needing social/affordable wheelchair accessible stock, and the allocations to that stock when it becomes available. There are a number of reasons for this including the need to minimise void periods and mismatches between locational preferences and the available stock. However, as set out in our Housing Evidence Paper, the development of council-controlled land is a key mechanism by which the policy ambitions set out in the Draft Local Plan and the London Plan 2021 on this type of housing will be achieved in the Borough.

Currently, in the Be First housing scheme pipeline alone, there are 288 M4(3) homes planned (of which 171 will be fit out at practical completion and the remainder have the appropriate service and size to fit out at a later point). As such, we believe we remain in a strong position to meet the unmet need for wheelchair accessible accommodation in the borough even before the 10% requirement is taken into consideration for non-Be First schemes.

Furthermore, the Plan subscribes to the criteria for new accessible housing development laid out in the London Plan Policy D7. This states that at least 10% of dwellings should meet Building Regulation requirement M4 (3) 'wheelchair user dwellings', i.e., is designed to be wheelchair accessible, or easily adaptable for residents who are wheelchair users, and all other dwellings meet Building Regulation requirement M4 (2) 'accessible and adaptable dwellings.'

Student housing

The 2019 SHMA and HNS set out that there are likely to be around 6,000 students requiring independent accommodation studying at Barking and Dagenham-based Higher Education establishments, suggesting there may be scope for more purpose-built developments. The 2020 update noted that the expansion plans of Coventry University (in Barking and Dagenham) had reduced and therefore we expect this need to be less. Policy DHM 4 encourages new purpose-built shared housing schemes where they meet relevant policy requirements, including meeting an identified need in the Borough. This could include student housing.

Furthermore, BRL is now looking to diversify the range of developers to include specialist build to rent, student housing and care. It is therefore anticipated that some student housing need could be met at Barking Riverside.

Self-and-custom build housing

As of November 2023, there are a total of 328 individuals and 4 groups on the Barking and Dagenham Self-and-Custom Build Register. Whilst we have not delivered specific sites to meet the
21/12/2023

Be First

self-and-custom build need, policy SP3 in the submitted Local Plan encourages these to come forward.

In terms of supply, the SHMA only considers sites which are anticipated to provide for 5 units or greater, however, we are currently undertaking work to bring forward smaller, Council owned sites, that would be suitable for this type of development.

The delivery of small sites is an area the Council is actively trying to address through its Innovative Sites Programme. The key objective is to help diversify the type of delivery of homes in the borough. This is broken down into 3 work streams: 1) sites for disposal for SME developers and housebuilders, 2) disposal for community led housing, and 3) disposal for Be First non-general needs housing. As part of workstream 1 and 2, we will be welcoming of people interested in delivering self and custom build homes. We will monitor the delivery of our Innovative Sites Programme to see the impact this has on self-and-custom build delivery, whilst also monitoring the CIL forms that accompany new dwelling planning application forms.

We also intend to utilise the changes to regulations made in 2016 to set a local eligibility test so that we can focus our self-and-custom build efforts on those with a local connection. As part of this work, we intend to reach out to those on our register and confirm who would still like to remain on it.
Policy

Amend section 2 as follows:

2. In order to address the borough's housing need, the Council will:
 - a) seek a 50% strategic target for on affordable housing on all private sector housing schemes (in line with Policy H4 in the London Plan 2021), and
 - b) prioritise self-contained family housing, followed by PRS, and then other forms of housing, to ensure that new residential development does not limit the supply of self-contained housing, in particular family housing, and
-
 - c) require development which impacts on delivery of the most needed forms of housing (as set out by priority in criterion b above) to thoroughly demonstrate a need for this type of housing and align with other Local Plan policies, and
 - d) require provision of wheelchair accessible accommodation across all tenures in conformity with the requirements of Policy D7 of the London Plan 2021, and
 - ~~d) — support the delivery of quality new homes that accord with policy DMD 1: securing highquality design, and the Mayoral supplementary planning guidance~~
 - e) e) support planning applications that are in line with other policies in this Local Plan and meet the needs of specific communities, including older people, disabled and vulnerable people, LGBTQ+ community, students, families and private rented sectors (PRS). and Gypsies and Travellers and,
 - f) f) support planning applications that help to meet the accommodation needs of the Gypsy and Traveller community, in line with the accommodation needs assessment and criteria set out in DMH 6, and

- g) encourage community groups and local organisations to take on leading roles in the delivery of new homes through the Council's programme of housing innovation³², taking the opportunity to test and trial innovations around sustainability and construction, and
- h) work proactively with developers to ensure that proposals demonstrate how they will benefit people who live and work in Barking and Dagenham. This could be, for example, through providing homes for local people and services and infrastructure that benefit the local Effectiveness, and ~~–wherever possible, homes delivered are marketed to, and occupied by, people who live and work primarily in Barking and Dagenham.~~
- i) Seek to deliver the London Plan target of 70 homes a year for specialist older persons housing by collaborating with providers to identify suitable sites, in conformity with Policy H13 of the London Plan 2021.
- j) Seek to meet the borough's small sites target through the identification of small infill sites, vacant garage sites and Council-owned land, including the exploration of areawide housing design

DMH1

Amend clause 1 b to include which applications will require early and advanced stage review mechanisms as follows:

providing early and advanced stage review mechanisms in line with Mayoral guidance to applications taking the Viability Tested Route (VTR) and those schemes where an agreed level of progress has not been reached in a specified time for Fast Track Route (FTR) applications, to maximise the delivery of affordable housing where development viability improves

Expand clause 2 a to include a commitment to meet the borough's off site affordable housing targets as follows:

The target for schemes delivering off-site affordable housing or in lieu contributions is 50% provided across the main site and any linked sites when considered as a whole.

Add new section to clarify position on developments under 10 homes as follows:

3. Affordable Housing will not generally be sought on housing schemes of under 10 units. The exceptions to this are:

- where additional homes are proposed through amended planning applications within four years of the commencement of the original planning permission, affordable housing requirements will apply to the total number of net new homes), and
- where development sites are split, or separate proposals are brought forward on neighbouring or nearby sites which are physically or functionally linked, affordable housing requirements will be assessed on the total number of net residential units proposed across all related sites.

DMH 2

Amend paragraph 1 of Policy DMH 2:

Development proposals will be required to provide a range of unit sizes (including family housing) ~~in accordance~~ in consideration with the Council's preferred housing size mix table below, or in any future subsequent affordable housing needs evidence subject to viability.

Amend paragraph 2 of Policy DMH 2:

2. The Council will only consider a different housing mix, ~~having regard to the following factors~~ where a developer demonstrates:

a) that the proposal ~~must~~ meets the tenure split requirements outlined in the Local Plan Policy DMH 1: affordable housing (subject to viability), and

b) the applicant ~~will be expected to~~ provides up-to-date evidence of housing needs by taking account of the Council's latest local evidence identified by the LBBD Strategic Housing Market Assessment along with the local Housing Register.

DMH 3

Amend title of policy as follows:

Policy DMH 3: Specialist Older Persons Housing

Amend clause 2a to include reference to a specific figure for adapted housing as follows:

meet the relevant London Plan ~~policy (Policy H13) requirements~~ indicative benchmark figure (Policy H13: specialist old persons housing) of 70 new homes a year and criteria for new accessible or adapted housing (Policy D7 and H14), or its updated equivalent

Amend paragraph 2 (e) as follows:

Is supported by a legal agreement for occupation by a relevant operator where appropriate

DMH 4

Amend title of Policy DHM 4 as follows:

Policy DMH 4: Large-scale purpose-built shared housing

Amend sub-section 1a) as follows:

1a) Meet the London Plan policy H16: Large-scale purpose-built shared living and London Plan planning guidance, including Policy D6 space standards, for this form of accommodation, and London Plan Policy D6: space standards requirements alongside any GLA guidance on this matter.

Amend sub-section 1c) as follows:

1c) are located within transformation areas as identified in SPDG 1 and shown on the Policies Map. ~~preferred areas in accordance with Place policies (see Chapter 3: Transforming Barking and Dagenham).~~

DMH 5

21/12/2023

Be First

Amend sub-section of 1b) as follows:

1b) do not result in the loss of housing capable of accommodating families with children ~~existing family housing, or dwelling houses capable of accommodating a small family with children~~

Amend sub-section 1e) as follows:

e) comply with relevant standards, including those set out in the East London HMO Guidance¹ and satisfy the housing space standards outlined in the London Plan policy D6: housing quality and standards, and/or its relevant guidance.

¹<https://www.lbld.gov.uk/sites/default/files/2022-07/HMO-East-London-guidance.pdf>

Delete section 2 as follows:

~~2. The number of houses that have been converted to flats or HMOs in any road (including unimplemented but still valid planning permissions) must not exceed 10 per cent of the total number of houses in the road; and no two adjacent properties apart from dwellings that are separated by a road should be converted~~

Appendix 4: Housing Trajectory

Replace current page with updated Housing Trajectory.

Appendix 2: Assumptions Underpinning the Updated Housing Trajectory - December 2023

Deliverability - National Policy

The National Planning Policy Framework sets out the following definitions of deliverable and developable sites:

Deliverable: "To be considered deliverable, sites for housing should be available now, offer a suitable location for development now, and be achievable with a realistic prospect that housing will be delivered on the site within five years. In particular:

a) sites which do not involve major development and have planning permission, and all sites with detailed planning permission, should be considered deliverable until permission expires, unless there is clear evidence that homes will not be delivered within five years (for example because they are no longer viable, there is no longer a demand for the type of units or sites have long term phasing plans).

b) where a site has outline planning permission for major development, has been allocated in a development plan, has a grant of permission in principle, or is identified on a brownfield register, it should only be considered deliverable where there is clear evidence that housing completions will begin on site within five years."

Developable: "To be considered developable, sites should be in a suitable location for housing development with a reasonable prospect that they will be available and could be viably developed at the point envisaged."

Assumptions Background

This note sets out the general assumptions that have been made to inform the latest update to the Housing Trajectory, taking into account the definitions provided by national planning policy for deliverability and developability. However, intel on individual sites may cause some variance to the below (e.g., where we are aware a site with planning permission is likely to have delayed delivery).

Before setting out the assumption methodology, it is also important to note that producing a housing trajectory that accurately reflects the amount of delivery over the Plan period is really difficult at the moment due to economic factors over the past few years impacting on our baseline calculations/assumptions. Be First have tried to make robust judgements based on previous delivery rates, information from developers, and the status of planning applications. Be First are keen to ensure that in overall terms, the trajectory reflects the level of development expected to come forward over the Plan period as a whole.

Assumptions/Methodology

General Commencement/Completions Assumptions

Assumption 1: Sites with planning consent

Where a site has full planning consent or is resolved for approval, delivery is estimated to start completing within 2 years.

Assumption 2 Methodology:

Examples of allocated sites already delivering homes were looked at to ascertain if this assumption was feasible. Recent examples of sites that have gone from full/RM planning application approval to partial or full delivery within 2 years are:

- Gascoigne Estate East (partial completion of 526 homes)
- Former Abbey Retail Park (partial completion of 1,089 homes)

Assumption 2: Sites where pre-app engagement is underway

Where pre-app engagement is underway, it is estimated that delivery will start completing within 3 years (for Be First schemes where we have more control over delivery rates), or within 4 years for 3rd party developers.

Assumption 2: Methodology

As Be First generally have less certainty over third party progress following pre-app discussions than for Be First schemes, it was judged that there should be 2 different assumptions for this. For Be First schemes, it is assumed that the pre-app to approval process could be completed within a year, and for third party schemes a longer period of two years is given to cover our uncertainty of their intentions. Examples of schemes that have been drawn upon to come to this assumption include Padnall Lake (a Be First scheme for 300 homes, where a hybrid application was submitted in August 2020 and received approval in March 2021 - full approval for 81 of the 300 homes), and Former Abbey Retail Park (a third party scheme for 1,089 homes, where a full application was submitted in November 2018 and approved in July 2020).

Assumption 3: Sites less than 10 units with planning permission, or sites currently under construction

For sites with less than 10 units with planning permission, or where sites are currently under construction, we have assumed completions will start in the next year.

Assumption 4: Sites without planning permission or recent intel on imminent delivery

For sites without planning permission and where we do not have details of a planning application or recent developer engagement suggesting delivery is more imminent, we have put expected delivery starting at year 11 (2033/34). This includes some larger council owned sites which we expect to start working on proposals for later in the Plan given current resource being directed toward the several sites currently under construction.

Build-Out Rate Assumptions

Assumption 4: Build-Out Rate (from commencement) for Be First Schemes

For Council owned sites, there is an assumption of a 200 homes per annum build out rate. This appears achievable based on recent Gascoigne Estate delivery.

Assumption 4 Methodology:

This 200 homes per annum figure was calculated by looking at Gascoigne East delivery between when delivery started within the Plan period and expected completions by the end of this financial year (including a plot of 124 homes expected to complete in January). For Gascoigne East, this averaged out at 186 homes per year (over the 3-year period). For Gascoigne West, the average for the same period works out as 294 homes. Therefore, a figure of 200 per year per development

seems an achievable (albeit potentially conservative) estimate for delivery on Be First schemes. For wider context on Be First schemes, for the 2023/24 financial year, Be First schemes are expected to deliver ~800 homes on Council owned land.

Assumption 5: General Build-Out Rate (from commencement) for third party sites

There is a general baseline assumption of a 150 homes per year build out for applicable sites.

Assumption 5 Methodology:

The Strategic Land Availability Assessment (2021) set out an assumption that all sites will be constructed at a rate of up to 250 units per year unless there is specific evidence indicating that the delivery rate will likely be different (with Be First is committed to actively encouraging and enabling modern methods of construction (MMC) which might increase the build out rate in the future).

However, we have revised our current assumptions on expected build-out rate to take an approach that more closely reflects recent records of third party delivery rates since the start of the Plan period for larger sites. It should be noted that Be First feel this to be a conservative approach, and that figures been influenced by recent challenges facing the housing sector over the past three years (Covid, Brexit, cost of living increases/inflation etc). As such, there are more limited examples of large-scale site delivery to draw from, but we have still tried to more closely reflect what has happened on the ground over this period as a minimum.

The assumption of a 150 homes per annum build out rate has been calculated by looking at the recent completions for larger sites over the first 3 years of the Plan period (e.g., Barking Riverside and Abbey Retail Park), which were added together and then averaged. This produced a figure of 145.5. In line with this (and the other factors such as Bexit, Covid and inflation which have hindered delivery during the past 3 years), we do not think 150 is an unreasonable minimum figure to set as a baseline, and judge it is likely to be an underestimate.

Assumption 6: Exceptions to general baseline assumption

There are some exceptions to our general baseline assumption (i.e., where we believe build out rates could be significantly higher or could fluctuate more).

Assumption 6 Methodology (with reference to specific sites)

The complexity of these schemes (in terms of various timings for plot delivery/phasing and planning application stages) has made it difficult to calculate figures for Barking Riverside, Beam Park, and Former Ford Stamping Plant on a yearly basis. Adopting the baseline figure set out in assumption 2 for third party developers (a 150 per annum build out rate) would significantly underestimate delivery and does not coincide with the information the developers are providing on their expected completions dates. Therefore, expected delivery has been averaged across the period completions are expected. Further detail on individual sites is set out below:

I. Barking Riverside

EX177¹ has been used to inform when total completions within the Plan Period are expected by, and this has been averaged over the remaining years. For Barking Riverside, there is an assumption that both the 1,606 homes currently with RM approval, and the 2,450 homes

¹ Barking Riverside Housing Table submitted by BRL to the examination showing expected completion dates for the scheme over the Plan period: <https://yourcall.befirst.london/11324/widgets/38986/documents/50244>

with sub-framework approval, are likely to be deliverable in the first 5 years based on our understanding of the developer's delivery projections and the stage they are at in planning.

This roughly aligns with the averages set out for the first 5 years in the trajectory (~3,825 for the first 5 years assumed via averaging total Plan period delivery over the Plan period, vs. a total of 4,056 with either RM approval or an agreed SFP).

II. **Beam Park and Former Ford Stamping Plant**

Completion dates set out in planning application supporting documents have been used to inform end dates for delivery within the Plan period. Again, these have been averaged out based on end completion date. These are set out below for context:

- Beam Park

Phase A of the above is now complete, and Phase C has RM approval.

-Former Ford Stamping Plant (also known as Dagenham Green)

Phase	Homes	Start Date	End Date
Phase 1	937	2023	2029
Phase 2	873	2025	2031
Phase 3	536	2031	2034
Phase 4	466	2033	2036
Phase 5	690	2034	2039

Phase 1 has RM approval. Similar to BRL, this roughly matches the averages set out in our trajectory below for the deliverable period (937 homes with RM approval vs. 750 for the first 5 years assumed via averaging total Plan period delivery over the Plan period).

- III. **Large sites expected to start coming forward in the medium-longer term with multiple landowners who could bring forward development.** For these, delivery (with the exception of Thames Road and Castle Green) has been averaged across the period of the Plan where delivery is expected. This is because a lot of the plans for these sites are currently much higher level, and therefore it has been difficult to anticipate the delivery rates that will come forward on a yearly basis. Whilst some of the delivery rates appear quite high, it is judged that given the multiple land ownerships, this is achievable. For example, there are currently 3 planning applications 'resolved to approve' for Thames Road where delivery is anticipated in 2026/27. These total 626 homes and suggest that a combination of landowners/developers and applications could deliver higher build-out rates for such sites.

- Thames Road - some housing is already planned for Thames Road, with 156 homes already delivered and a further 862 'resolved for approval' across 4 planning applications. For the 'resolved to approve' planning applications, and housing which has already been delivered, we have set out anticipated time periods for delivery using the planning applications as a starting point. As this would leave an average of less than 150 per year over the remainder of

the Plan period, the 150 per year average has been used for the remainder of the 2,000 indicative capacity (as set out by the SHLAA).

- Castle Green - Most of the delivery capacity of Castle Green is expected beyond the Plan period as a result of the current site constraints (flyover replacement and SIL designation). Housing development is not expected to start coming forward until around 2030. As such, we have adopted a conservative approach and used the '150 build out rate' assumption. Due to the multiple landownerships, we think it is possible that this figure could be higher, but given it is relatively high-level at this stage until a further review of the Plan amends the SIL designation for parts of the site (and in the later period of the Plan), it is thought the baseline approach is justified.

- Chadwell Heath - housing is expected to start coming forward sooner than for Castle Green given: the lack of SIL constraint (the land is LSIS and therefore suitable for colocation), the work we are doing on the Masterplan SPD/delivery strategy, the improved connectivity of the site (i.e., location to new Elizabeth Line) and the interest we have started to see for housing there from developers looking to bring forward sites. Given these factors, and the multiple landowners, higher rates than the general '150 build out rate' assumption are expected. Be First are of that view that using the baseline assumption build out rate would significantly under-estimate to the public the development that we expect to come forward in the area over the Plan period.

- Hertford Road Industrial Estate - we do not have the detail yet to be able to accurately reflect a yearly build-out rate, but suggesting 150 a year could underestimate the capacity that come forward during the Plan period, hence our use of the averaging approach across the expected period of delivery.

- Gascoigne Industrial Estate - we do not have the detail yet to be able to accurately reflect a yearly build-out rate, but suggesting 150 a year could significantly underestimate the capacity that come forward during the Plan period, hence our use of the averaging approach across the expected period of delivery.

Conclusion

The updated trajectory forecasting housing delivery over the remainder of the Plan period is underpinned by several assumptions. We have made these assumptions in order to try and produce a year-by-year breakdown, however, every site will have its own circumstances and so we have tried to be clear where we are aware there are particular exceptions. That said, we have taken an evidence-based approach to assembling these assumptions to ensure they are as robust as possible, looking at recent delivery of Be First and third party development and taking into account recent information provided by developers, as well as the significant regeneration work happening on the ground (e.g., improvements to transport infrastructure such as Barking Riverside Station which we anticipate will act as a catalyst for development.)
